## Suite 7.1 HD Luxury HT Preamp

The Suite 7.1 HD is ADA's brand new home theater controller/preamplifier featuring 8 HDMI inputs in addition to four analog audio and 8 digital audio inputs (6 coaxial & 2 optical). You can connect up to twenty components to the amazingly small (only 1 rack-unit tall) Suite 7.1 HD. But don't let its size fool you. The Suite 7.1 HD is the most sophisticated ADA home theater preamplifier to date, incorporating the latest Dolby TrueHD, DTS-HD Audio Master and Multi-Channel PCM decoding capabilities. These lossless uncompressed formats on high-definition Blu-ray DVDs sound amazing when listened to on the Suite 7.1 HD. Just as HD video is noticeably better than regular DVD, high-resolution audio is dramatically better than regular 5.1 or 7.1 surround sound. You really can hear the difference and will never want to watch or listen to regular DVDs ever again. From film to TV series to concerts, everything looks and most important, sounds better on Blu-ray and the Suite 7.1 HD. Naturally, the Suite 7.1 HD also features decoding of the standard Dolby, DTS and THX formats as well as several proprietary modes for music and TV. From a technical standpoint, the Suite 7.1 HD features HDMI equalization per input and output to compensate for HDMI cable type and length. It also features a multi-band parametric equalizer per channel as well as other features only available from ADA. If high-definition is how you want to experience theater in your home, then an ADA home theater system is the very best choice you can make.

- Dolby TrueHD & DTS HD Master Audio
